Email Address Verification

Real-Time Verification Capabilities

Validate, parse, and correct email addresses to help your organization improve email deliverability and increase response rates. Additional benefits of Email Address Verification include: reduce bounce-backs and Spam complaints; improve your reputation as an email sender; and increase open rates, clicks, and conversions. Our solution is available as an API, Web Service & via Batch Processing.

What it does

Email address verification checks for general format syntax errors & domain name changes; checks for & corrects top level domain name (TLD); ensures addresses use a valid top level domain; detects improper email address format for common domains; validates domain name; verifies domain name through MaileXchange (MX); lookup for realtime feedback; and parses email addresses into various components.

Input/Output

Sample Email Input	Sample Email Input
Bud@800miAL.con	Email: bud@melissadata.com
	Domain Name: melissadata
	Mailbox Name: bud
	TLD Name: com
	TLD Desc: commercial

System Requirements

Multiplatform API - Library available for Windows 2003/2008 7/8.x; Red Hat; Solaris: SPARC; AIX: Power, rs/6000, PPC; HP/UX: PA-RISC; and Itanium.
